Preface

The purpose of this document is to inform the taxpaying public of the mission, legal requirements, organization, workload, past performance, and necessary changes to the district's operations to accomplish the plan requirements regarding the valuation and revaluation of taxable property within Freestone Central Appraisal District as summarized in the last section of this document.

In compliance with Section 6.05(i) of the Property Tax Code of the State of Texas, the board of directors of the Freestone Central Appraisal District conducted a public hearing to consider the adoption of the following reappraisal plan.

Mission

The mission of Freestone Central Appraisal District is to discover, list and appraise property as accurately, ethically and impartially as possible in order to estimate the market value of all property within the boundaries of the district for ad valorem tax purposes. The district must make sure that each taxpayer is given the same consideration, information and assistance as the next. This will be done by administering the laws under the property tax system.

Personnel must be well educated and informed regarding laws, appraisal practices and the rights of taxpayers and the entities alike. This will be accomplished through attendance of key personnel to workshops sponsored by the Texas Association of Appraisal Districts, the Texas Association of Assessing Officers, the Texas Rural Chief Appraiser's Association as well as workshops conducted locally for in-house staff development. Additionally, the staff will promote and adhere to professional standards and ethics as set forth by the Texas Department of Licensing, The Appraisal Standards Board of the Appraisal Foundation (USPAP), the Texas Association of Appraisal Districts and the Texas Association of Assessing Officers.

Legal Mandates

FCAD is a Central Appraisal District formed by the Texas Legislature in 1979 and is charged with the appraisal of all taxable property within the district.

The district appraises all taxable property for the following taxing authorities:

Freestone County,
City of Fairfield,
City of Teague,
City of Wortham,
Dew I. S. D.,
Teague I. S. D., and
Teague Hospital District

Additionally, the district provides appraisals of taxable property within Freestone County for the following entities whose territory extends into more one county.

City of Streetman, Buffalo I. S. D., Fairfield I. S. D., Oakwood I. S. D., Corsicana I. S. D., Wortham I. S. D., Mexia I. S. D., and Fairfield Hospital District

The Texas Property Tax Code governs the legal, statutory, and administrative requirements of the appraisal district. It is governed by a board of directors appointed by the taxing units within its boundaries. The chief appraiser, appointed by the board of directors, is the chief administrator and chief executive officer of the appraisal district.

The appraisal district is responsible for local property tax appraisal, including the qualifications for special use valuation determination (i.e. timber, wildlife, and "ag" valuation) as well as exemption administration for the fifteen taxing units located in part or whole in the county. Each taxing unit, such as the county, a city, school district or hospital district, sets its own tax rate to generate revenue to pay for such things as police and fire protection, public schools, road and street maintenance, courts, water and sewer systems, and other public services. The CAD also determines eligibility for various types of property tax exemptions such as those for homeowners, the elderly, disabled veterans, and charitable and religious organizations.

Section 23.01(b) requires the appraisal district to determine market value of property according to generally accepted appraisal methods and techniques. Mass appraisal standards must comply with the Uniform Standards of Professional Appraisal Practice (USPAP).

According to Section 6.05 (i) of the Property Tax Code, the district is required to hold public hearings and adopt a reappraisal plan by resolution before September 15 of even numbered years. The plan must list in detail the district's intentions regarding the reappraisal of property within the district over the following biennial period.

Notice must be given at least 10 days before the hearing to the presiding officers of each of the district's participating taxing units. After adoption, the adopted plan must be delivered to each of the presiding officers of each of the district's participating taxing units as well as to the Texas Comptroller of Public Accounts within 60 days of approval.

The definition of market value as established by the State Property Tax code differs from the definition established by USPAP, therefore, a *jurisdictional exception* applies.

Property will be appraised by the district using the following definition of market value, as stated in Section 1.04 of the Texas Property Tax Code:

Market value means the price at which a property would transfer for cash or its equivalent under prevailing market conditions if:

- exposed for sale in the open market with a reasonable time for the seller to find a purchaser;
- both the seller and the purchaser know all of the uses and purposes to which the property is adapted and for which it is capable of being used and of the enforceable restrictions on its use; and,
- Both the seller and purchaser seek to maximize their gains and neither is in a position to take advantage of the exigencies of the other.

Except as otherwise provided by the Property Tax Code, all taxable property will be appraised at its "market value" as of January 1st. Inventory owners who file a request by the 31st of July prior to the appraisal year will have their property appraised at market value as of September 1.

Organization

Appraisal districts were created by the Texas Legislature in 1979 to provide uniform and equal appraisals of taxable properties at market value for ad valorem tax purposes. The district is governed by a board of five directors elected by the governing bodies of the participating taxing units. The county tax assessor/collector serves on the board as an ex officio member.

The board of directors is responsible for:

- Establishing the district's office;
- Adopting the district's annual operating budget;
- · Contracting for necessary services;
- Hiring the chief appraiser;
- Appointing the Appraisal Review Board (ARB);
- Appointing the Agricultural Advisory Board; and,
- Making general policy of the district's operation.

The board's authority over appraisals is limited. The board does not appraise property or review values on individual properties. These tasks are legally assigned to the chief appraiser and the Appraisal Review Board (ARB). The board's authority over appraisals comes through its duties to contract and budget for the district's operation.

The ARB is appointed by the board of directors to hear and settle formal taxpayer protests. The board's decisions are binding to the district's records. The district may file suit in district court to have an ARB decision overturned if the chief appraiser and board of directors so choose.

The Agricultural Advisory Board is appointed by the Board of Directors, according to the recommendations of the Chief Appraiser in accordance with Section 6.12 of the Property Tax Code and FCAD Administrative Policy 3.00. Its purpose is to advise the chief appraiser on the valuation and use of land that may be designated for agricultural use or that may be open space agricultural or timber land within the district.

The chief appraiser is the chief administrator of the district and is responsible for the district's appraisal operations. The appraisal district staff is employed and directed by the chief appraiser.

An Organizational Chart of the district's boards, chief appraiser, and staff members is attached as Addendum 1.

Workload

The district is responsible for establishing and maintaining appraisal records for approximately 238,000 real, personal, mineral, and industrial property accounts within the district. This data includes property characteristic data and exemption information.

Data on new construction is updated through an annual field effort; existing property data is maintained through a field review according to the periodic reappraisal plan adopted by the board of directors. Mobile homes frequently move into and out of the district quickly. Their locations are particularly difficult to determine when owners do not own the land where the mobile home is situated. Reports of location from the Texas Department of Housing are helpful but many times the situs location reported on the form is incorrect or nonexistent. Tracking mobile homes becomes a cumbersome task that slows the production of field reviewers.

Sales are routinely validated via sales disclosure request forms sent periodically to the property owners. The district aggressively seeks sales information from buyers, sellers, fee appraisers, and realtors in an effort to expand the sales database used to test appraisal models. The district performs statistical testing (ratio studies) to identify areas where added attention is needed. Final studies are performed in April each year to calibrate appraisal models for the appraisal year. The models are applied to the appraisal records and tested for uniformity. The testing cycle continues until the desired appraisal level for all property classifications is between 95 percent and 105 percent and the overall coefficient of dispersion is under 20.

The district maintains its website (freestonecad.org), making information available to the public via the internet including:

- Policies of the Board of Directors and Appraisal Review Boards:
- Agendas and minutes for meetings of the Board of Directors, Appraisal Review, and Ag Advisory Boards;
- · Current public notices;
- Current and proposed budgets:
- Exemption and Special Valuation Application Forms;
- Various reports including the:
 - Utility Usage Report
 - o Annual Report
 - o Annual Summary Reappraisal Report, and
 - o Current Reappraisal Plan;
- A calendar of appraisal and tax collection activities;
- Various informational pamphlets created by the district for taxpayer information
- Links to the Comptroller's website for ad valorem tax information;
- An interactive map of the district;
- Current certified appraisal data record search;
- Downloadable data for maps and appraisal data; and,
- Seasonal information regarding filing protests, including instructions for filing on-line protests.

Landmen, realtors, and insurance offices are able to obtain most of the information they need from the website. When it is necessary for them to contact the district, they are usually able to provide parcel identification numbers or other identifying data from the district's records as posted on the internet.

FCAD implements the computer assisted mass appraisal (CAMA) program licensed, maintained, and supported by Pritchard & Abbott, Inc. in Fort Worth, Texas. The software operates via a local PC network maintained in-house. The software allows the district to attach digital photographs and documents in the portable document format (pdf) to the appraisal record.

The district maintains the majority of its records electronically. All paper documents are scanned into an Adobe Acrobat file as received or generated by the district. Preserving these records in this manner has been approved by the district's board of directors and the Texas State Archives Commission. All records are electronically backed up and saved off-site daily. Once the integrity (of imagery and file location) of electronic documents has been verified, paper copies are destroyed.

The district has a mapping system that maintains maps and various layers of data including aerial photography in ESRI *ArcEditor* software. Current ownership information, along with general parcel information, is extracted from the CAMA database and linked to the GIS mapping data for general information and query purposes. All workstations within the district office are able to electronically access the maps. With various map layer files geographically associated with the district's base map, staff can easily identify property characteristics including:

- NRCS Soil Classification for pasture, crop, and timber types,
- USDA aerial photography (several years available for comparison),
- USACE topographical maps.

Other raster image files may be imported into the district's GIS database from various sources, providing powerful tools for property pre-inspection and discovery as well as identification of individual property characteristics utilized to modify the appraisal model for a specific property.

GoogleEarth is also utilized by the staff to review property as some of the images are clearer and in some instances newer than those prepared by USDA. A copy of the district's GIS map data is periodically updated and is viewable as a reference layer in this software.

The district publishes and maintains its appraisal manual and schedules on a local intranet hosted by the personal computer network. This project eliminates the need for printed manuals that are difficult to update. The district's policies, appraisal schedules, property characteristics, and procedures are posted on the intranet and are available on every computer in the network domain. The district has maintained appraisal schedules, policies, appraisal rolls, and other data on the local website since 2003. The electronic publication of these documents and historical schedules makes the task of adding omitted property to the roll easier when the necessary pricing schedules are readily accessible.

Previous Reappraisal Plan Performance

The Board of Directors of the Freestone Central Appraisal District adopted a resolution concerning the reappraisal of property on August 10, 2016. The resolution provided for a planned reappraisal of one-third of the district each year.

FCAD appraisers completed the field inspection and review of property according to the reappraisal plan by the target dates of March 1 in 2017. However, the 2018 inspection schedule was not completed by the target date of March 1 due to extended illnesses and staff reassignment. The uninspected properties represented approximately six weeks of inspections. Those properties will be inspected prior to the commencement of the 2019 schedule and in all instances, those properties have been inspected within the required three year plan.

Revaluation field inspections required the appraisers to check all property characteristic data on the property record cards and to update if necessary. When physical inspection of the property indicated changes to the improvements, the appraiser noted these changes in the field and applied them to the parcel's record in the district's CAMA system in the office. As required by IAAO Standards, two sides of the main structure of each parcel were verified for accuracy. Digital photographs were taken and attached to the CAMA record as well.

New construction was discovered, listed, and appraised throughout the county from personal observation of field appraisers and other reliable sources, including:

- deeds or other legal documentation,
- aerial photographs,
- · surveys, maps, and property sketches,
- building permits,
- utility hookups,
- septic tank permits,
- 911 address reports,
- Comptroller sales tax list,
- phone books,
- newspaper advertisements,
- subdivision maps,
- automobile registration lists, and
- mobile home location lists from the Texas Department of Housing.

Properties not included in the reappraisal schedule were reviewed if a request was made by the owner. Parcel records were flagged in the CAMA system throughout the year so that appraisers could review all properties in an area at one time. While reviewing flagged parcels, appraisers searched for new improvements in visited areas that were unknown to the district through the previously listed sources. This task was completed by the target dates in 2017 and 2018.

Reports from the Texas Railroad Commission and owner/operators were used for the valuation of producing oil, gas, and mineral parcels.

Property owners were informed by mail of the removal of exemptions and special valuations both years in January. A brief explanation for the removal was provided in the letters. Parcels where applications for exemptions and special valuations were ten or more years old were requested to re-file applications. Updated applications were included with these letters.

Exemption and special use valuation application forms were made available to the public in the district's office as well as through the district's website. Taxpayers were also able to obtain application forms from the Comptroller's website.

Exemption and special use applications that were returned to the office were reviewed. Incomplete applications were returned to the applicant for completion. Applicants were notified by mail when more data was required to process the exemption or special use valuation applications. Field review was performed to validate the qualifications of the applications before they were approved. When the application was denied or modified (i.e. qualifying acreage changed from application), the applicant was notified by certified mail of the denial or modification of the exemption or special use valuation.

Cost schedules (appraisal models) were tested against sold properties and adjustments were made as needed annually in order to keep them reflective of market value. (When appraisal models are reviewed and adjusted to reflect market value and are calibrated for uniformity, a reappraisal has occurred on the property whether there was actually a field inspection or not that year.)

The district completed its reappraisal process and delivered on the scheduled date notices of appraised value to property owners where taxable value was increased \$1,000 over the previous tax year as we'll as to new property owners in both appraisal cycles.

Each year, the district informally provided explanations to property owners and defended its values, making adjustments when justified, until the chief appraiser delivered the records to the Freestone Appraisal Review Board (ARB). Staff appraisers continued taxpayer explanations and value defense informally until the ARB began formal taxpayer hearings where staff appraisers represented the appraisal district in ARB hearings until the ARB approved the records.

The Chief Appraiser delivered Certifications of Value and Summary Appraisal Reports to the participating taxing authorities by July 25 in both 2017 and 2018. The Summary Appraisal Report was delivered to the Appraisal Review Board and the Board of Directors during their regular meetings in May in both 2017 and 2018, and the report was made available to the public on the district's website both years as well.

Plan Requirements

The district is required to perform certain tasks in its reappraisal cycle according to:

- The laws of the State of Texas,
- Rules established by the Property Tax Assistance Division of the Texas Comptroller's Office (PTAD),
- Professional Standards of the International Association of Assessing Officers (IAAO), and
- The Appraisal Institute's Uniform Standard Professional Appraisal Practices (USPAP).

1. The district will discover, list, and appraise all properties within the boundaries of the district.

The district will identify property by physical inspection or by other reliable means of identification, including deeds or other legal documentation, aerial photographs, surveys, maps, and property sketches, building permits, utility hookups, septic tank permits, 911 address reports, Comptroller sales tax list, phone books, newspaper advertisements, subdivision maps, automobile registration lists, and mobile home location lists from the Texas Department of Housing. Reports from the Texas Railroad Commission and owner/operators will be used for the valuation of producing oil, gas, and mineral parcels.

2. The district will perform an on-site inspection of each improvement within its boundaries at least once every three years.

The district will begin scheduled field review of parcels on September 1 each year. While performing the field inspections, the appraisers will review all data recorded on the district's appraisal records and look for changes in the condition of properties, i.e. fire damage, remodeling, additions, demolitions, and presence of or repair of existing physical deterioration of the improvements. Parcel and building characteristics including:

| Physical address (911 address), |
|---|
| Road type, |
| Utilities available, |
| Building foundation, wall, and roof types, |
| Building age, condition, type, and chronological age, |
| Routing codes, and |
| Any other notations or exceptions applied to a parcel |

will be reviewed by staff appraisers.

Additionally, appraisers will be required to remeasure two sides of existing improvements on approximately one-fourth of the district's parcels each year (in order to meet the standards required by the PTAD and IAAO to re-measure once every four to six years). Notation of re-

measurement will be recorded in the CAMA system.

Digital pictures will be taken and appended to the inspection worksheet and attached to the parcel record in the CAMA system.

All scheduled inspections will be completed by the following target dates:

| Property Type | 2019 Target | 2020 Target |
|-----------------------------------|-------------|-------------|
| Improvements | 2/22/19 | 2/21/20 |
| Business Personal Property | 1/25/19 | 1/24/20 |
| Land | 3/29/19 | 3/27/20 |

District Scheduled Inspections.

All improvements will be reviewed according to an improvement reappraisal schedule (Addendum 2). The district will strive to maximize the efficiency of the field reviewer by sorting the appraisal cards in a route order that places the records in a sequential order according to highways, streets, or roads. Each reviewing appraiser will be equipped with a laptop computer that will allow him to access the current appraisal database and the district's maps. An inspection worksheet will be completed to verify the characteristic data collected. A front elevation picture will be taken to replace the current (appraisal) card image in the CAMA along with an oblique photo that represents the front and one side of the structure. Additional pictures will be taken that support observations of building condition along with photos of other structures on the parcel.

New Improvements

The district will discover, inspect measure, classify, and add new improvements to the appraisal roll throughout the district annually. An inspection worksheet will be completed to verify the characteristic data collected. Photos will be taken in the manner as those required in regularly scheduled inspections.

Requested Review From Property Owner

The district will review parcels as requested by the property owners. Property records will be flagged for field review in the district's computer assisted mass appraisal system (CAMA) when a request is received from the property owner by mail, phone, email, or in person. An inspection worksheet will be completed to verify the characteristic data collected. Photos will be taken in the same manner as those required for regularly scheduled inspections along with additional pictures that reflect the concerns of the property owner.

Interior Inspections

The district will inspect the interior of structures at the written request of the property

owner. Ample pictures will be taken to support any observations of the structure that may call for additional adjustment to the building value.

3. The district will inspect each land parcel in the district at least once every three years.

The district will begin scheduled review of all land parcels according to a land reappraisal schedule (see Addendum 2), utilizing the most current aerial photography available to identify land types and other characteristics that may have an effect on market value. (i.e. well sites, ravines, wasteland, etc.) An inspection worksheet will be completed to verify the characteristic data collected.

4. The district will inspect each property that has items of personal property used for the production of income that has situs in the district annually.

The district will begin a scheduled review of all items of personal property that are used in the production of income (business personal property) within the district according to an annual reappraisal schedule for business personal property (see Addendum 2). Each business personal property parcel will be inspected to determine a list of properties that are subject to appraisal.

Businesses will be classified according to a standard industrial classification code (SIC) that will allow for grouping and comparison of like businesses. Additionally, each inventory and furniture/fixture/equipment sequence will be classified according to quality and density ratings as determined by the district's *Business Personal Property Valuation Guidelines*, in order to validate the renditions of property owners.

5. The district will contract with an outside firm to furnish appraisals on oil, gas, mineral, industrial, and utility properties.

The district currently has a contract with Pritchard & Abbott for appraisal services on these properties. The firm will be contractually obligated to comply with the Uniform Standards of Professional Appraisal Practices and to use only approved appraisal techniques or techniques required by state law as employees of the district. A copy of their plan for reappraisal of the district is attached to and made a part to this plan as *Addendum 3*.

6. The district will aggressively seek and collect valid sales information to calibrate its appraisal models.

Sales information will be collected from letters sent to property buyers and sellers, closing statements and title policies provided by property owners, and from realtors, fee appraisers, and MLS service listings when available. Real estate sales offerings listed in local newspapers and on internet sites will be reviewed.

7. The district will establish market areas in its mass appraisal system that consider the effects of location for adjusting its appraisal model.

All real estate parcels will be grouped according to market areas (or neighborhoods)

according to locational influences and trends recognized from analysis of sales and real estate listings in order. In establishing these market areas or neighborhood, the district will be able to further adjust and refine the appraisal model for properties based upon each property's physical location. A current listing of established neighborhoods with a general location map area attached as *Addendum 4*.

8. The district will annually conduct a performance analysis of its appraisal models.

The district will test its appraisal models so that all properties are appraised at a level between 95 percent and 105 percent of their current market value as of January 1 of the tax year. All properties will be appraised uniformly so that the coefficient of dispersion will be 20 or less each year. Calibrated appraisal models will be used in the form of a locally published web based manual. The web based manual will identify property characteristics affecting value in each market area as well as the contribution of those individual property characteristics. The district will apply the conclusion reflected in the adopted model to the characteristics of the properties being appraised to determine individual parcel values.

9. The district will uniformly modify appraisal models to account for unique property characteristics of each property.

Appraisal models for each property will be appraised utilizing the following formulas:

For Land:

where:

LV Represents the unadjusted value of the land as determined by applying the appropriate land appraisal model to the parcel's land area.

RF Represents the modification factor (applied to land only) typically assigned for location or topography adjustments

OLA Represents a modification factor (applied to land only) assigned at the appraiser's discretion to make further adjustments as a "cost to cure" the condition.

AIV Represents adjusted improvement value as determined by the model formula for improvement valuation (discussed further in the valuation of improvements section below)

NH Represents the neighborhood location factor that adjusts the value of the improvements only for location.

• For Improvements:

Market Value =
$$(((S * (C + D)) + E) * A * N * E * O)$$

Where:

S Total square footage of the unit

| С | Cost (classification based upon the appropriate appraisal model) |
|---|--|
| D | Value added (or subtracted) per square foot because of deviation from the appraisal model |
| Е | Lump sum value added (or subtracted) for any deviation from the appraisal model |
| Α | Percent good factors, based upon the effective age and observed condition of the structure |
| N | Adjustment factor for market area (neighborhood), and |
| 0 | Factor for any other adjustment made at the discretion of the reviewing appraiser |

Other structures attached to the property should be classified according to the district's applicable appraisal model schedule (i.e. porches, decks, carports, sheds, etc.)

• For Business Personal Property parcels where original acquisition cost and year are known:

Market Value = C * I * A * T

Where:

C Original cost of equipment item

I Factor that indexes historical cost (original cost) to current replacement cost

A Percent good factors, based upon the effective age and observed condition of equipment

T Factor for any other adjustment made at the discretion of the reviewing appraiser

 For Business Personal Property parcels where original acquisition cost and year are not known adjusted appraisal models for the Texas Property Tax Assistance Division will be utilized, using the following formula:

Market Value = U * C * T * S *D

Where:

U Total square footage of the unit

C Cost (classification based upon the appropriate appraisal model)

Trend factor, which allows for indexing of appraisal models for location and economic conditions.

S Service factor, based upon the life expectancy of equipment, furniture, and fixtures. (Not applicable to inventory items.)

D Percent good factors, based upon the effective age and observed condition of equipment, furniture, and fixtures. (Not applicable to inventory items.)

10. The district will consider the income approach to value on commercial properties.

Typical income and operating expense data will be collected by the district in order

to perform an income approach to value on properties where ownership of the property itself is for the production of income to its owner, i.e. apartments, hotels/motels, self-storage units, and RV parks. The approach may be considered also in the development of market values on other properties where the income stream is guaranteed to the property owner for an extended period of time through long term leases.

The following basic formula will be utilized in the development of values by the income approach:

$$Market Value = (G - E) / R$$

Where:

G Gross income for the total property

E Allowable operating expenses that are associated with the property, not the owner.

R Capitalization rate including factors for return on and to investments along with risk and ad valorum taxes.

11. The district will make application forms for exemptions and special valuations available to property owners.

Forms will be made available at the district's office and on its website. When requested, forms will be delivered to property owners via the U. S. Postal Service, fax, or e-mail. Taxpayers will have the capability of retrieving and printing forms via the district's website or the Comptroller's website. Original forms will be received by mail or in person. Faxed copies of forms will be accepted in place of the original for the purpose of meeting filing deadlines under the provision that the original is received by the district within one week of the filing deadline. The staff will promptly and courteously provide general information and assistance regarding the information required on the forms and the filing deadlines for those applications.

12. Property owners will be informed by letter when their applications are incomplete, require additional information or denied.

When exemptions and special valuations are removed, property owners will also receive notification by mail in accordance with the provisions of the Property Tax Code.

13. The district will communicate with owners of business personal property regarding the filing of required rendition statements.

The district will provide business personal property owners with inventory detail listings from the district's CAMA system each year prior to January 1. Property owners will be informed of penalties for failing to file a valid rendition or for filing a fraudulent rendition. The district's personal property appraiser will make a physical field inspection of each business personal property parcel in the district annually.

14. The district will attach digital copies of documents to parcels in the CAMA system.

The district will attach digital copies of documents according to its adopted record retention plan. The most common documents include:

- Exemption and special valuation applications,
- Written communication between the district and property owners regarding exemption applications,
- Protest documents,
- Sales confirmation letters and forms,
- Property renditions,
- Appointment of Agent forms,
- Land, Improvement, and BPP inspection worksheets,
- Photographs of property, and
- Any other documents deemed necessary of preservation with a parcel record.

15. The district will communicate with neighboring appraisal districts regarding parcels that are bisected by the county line.

The district will communicate with neighboring appraisal districts where parcels are bisected by the county line in order to determine the market value of the parcel as a whole.

16. The district will maintain current ownership information on its appraisal records.

The district will maintain the "most apparent ownership" on all of its appraisal records according to publicly recorded documents. Documents filed in the Freestone County Clerk's Office will be reviewed monthly and appraisal records updated accordingly when documents of conveyance are filed for record. Additionally, ownership of mobile homes will be determined according to the last recorded owner listed on mobile home titles issued by the Texas Department of Housing or from records filed in the Freestone County Clerk's Office (i.e. when mobile homes have been converted to real property). Commercial vehicles will be listed on the appraisal rolls according to the January 1 owners reflected by the records of the Texas Department of Transportation.

17. The district will maintain and enhance its digital mapping system.

The district will maintain its digital GIS mapping database of all real properties in an effort to accurately depict the property boundaries and location of all real parcels.

The district will perform audits of parcels in the CAMA system to validate the inclusion of all parcels in the district's GIS data.

Information layers from various sources including the Heart of Texas Council of Governments (HOTCOG), the United States Department of Agriculture (USDA), Natural Resource

Conservation Service (NRCS), and Texas Railroad Commission (TRC) will be added to assist staff appraisers in the identification and analysis of property characteristics.

When necessary, the district will perform limited research to maintain its maps and ownership information as stated in Requirement 13 of this plan.

18. The district will deliver notices of appraised notices as provided in the Property Tax Code.

The district will prepare and deliver by U. S. Postal Service all notices of appraised value as required by Section 25.19 of the Property Tax Code. The district's target date for delivery of notices is April 15 or as soon thereafter as practicable for real estate and personal property parcels. Because industrial personal property owners often receive extensions in filing renditions until May 15, notices of appraised value on business personal property as well as on all oil, gas, mineral, industrial, pipeline, and utility parcels will be prepared and mailed on May 25 or as soon thereafter as practicable.

19. The district will defend its values.

The district will meet informally with taxpayers in an effort to explain and defend the district's value. When individuals file formal protests with the Freestone Appraisal Review Board, the district will defend its value in the board's hearing on the case. The district will prepare evidence to support its position regarding market valuation, denial or modification of exemption or special valuation applications, and other matters protested by the taxpayer in which the district has decision making authority. The district statutorily has the Burden of Proof in protest cases regarding market value and equity.

20. The district will certify values to taxing authorities.

The district will prepare appraisal rolls for each taxing entity participating in the district each year by July 25 or as soon thereafter as practical. The district's chief appraiser will certify the values on those rolls to each taxing authority when the appraisal rolls are delivered.

21. The district will issue a Summary Appraisal Report.

The district will issue a Summary Appraisal Report, prepared to the specifications of the Uniform Standards of Professional Appraisal Practices each year in July at the end of the valuation process.

22. The district will maintain and enhance its Policies & Procedures.

The district will strive to record all policies and procedures regarding district operations in a manner that meets the standards of the International Association of Assessing Officers and the State of Texas. These policies and procedures will be published on a local intranet for use by CAD personnel and will be made available for public inspection on public access computer stations in the district's public area.

23. The district will perform all requirements of this reappraisal plan and the reappraisal cycle in a timely manner.

A Schedule of Appraisal Activities is attached as *Addendum 5* that serves as a reference for CAD staff for the establishment of target dates for start-up and completion of tasks associated with the reappraisal cycle.

24. The district will perform routine audits of its systems to ensure that they are performing as expected.

Periodic and random review of district records stored electronically will be performed to be sure that all documents are correctly created and electronically filed to meet the records retention requirements adopted by the district's board of directors and the Texas Library and Archives Commission.

Additionally, quarterly on-site inspections will be made by a licensed appraiser to validate that staff appraisers are properly applying the district's appraisal model to each property appraised.

Personnel Assignments

Bud Black, RPA/RTA/CTA, is the district's chief appraiser. Mr. Black is certified by the Texas Department of Licensing and Regulations (TDLR) as a Registered Professional Appraiser and a Registered Texas Assessor. Additionally, he is designated as a Certified Tax Administrator by the Instituted of Certified Tax Administrators, an entity of the Texas Association of Assessing Officers. Mr. Black employs and directs the district's staff, oversees all aspects of the appraisal district's operations and performs either directly or through the district's staff a variety of operations.

The Chief Appraiser's statutory responsibilities include:

- discovering, listing and appraising;
- determining exemption and special use requests:
- organizing periodic reappraisals; and,
- notifying taxpayers, taxing units and the public about matters that affect property values.

As chief administrator of the district, Mr. Black will supervise all of the district's activities including the supervision of all personnel and their activities.

FCAD staff appraisers are responsible for the valuation of all real and personal property accounts. The property types appraised include commercial, residential, agricultural, and business personal property. The district has contracted the services of Pritchard & Abbott for the appraisal of mineral, industrial, and utility accounts. All appraisers, including those whose services are contracted to the district, are required to be designated (or working toward designation) as Registered Professional Appraisers with the Texas Department of Licensing (TDLR).

Don Awalt, RPA/CTA, in his capacity of deputy chief appraiser, will be responsible for assisting the Chief Appraiser in the daily operations of the district.

Additionally, Mr. Awalt will be responsible for the maintenance and operation of the district's computer network and hardware. In this capacity, he will be responsible for the daily backup of the district's data and its storage off site.

Mr. Awalt will assist the Chief Appraiser in conducting statistical analysis of sales and appraisal information in the district's possession to validate the district's appraisal models and assist with the calibration of the CAMA system.

Mr. Awalt also serves as the district's map data manager. In this capacity, he will supervise all map projects and the integrity of the district's digital map data. *Melissa Marberry*, the district's mapper performs assigned map tasks under his direct supervision.

Along with other staff appraisers, he will defend the district's values informally with taxpayers and present defense testimony for the district before the Appraisal Review Board.

In the absence of the chief appraiser, he will be responsible for district's operations and personnel.

Carol Clark is the Chief Appraiser's administrative assistant. She will assist the chief appraiser in the daily operations of the district.

Ms. Clark will serve as the district's bookkeeper. She will review and receive all bills for the district. She will also receive all money collected by the district and make deposits to the district's depository.

She will also serve as the clerk to the Appraisal Review Board (ARB). Her duties to the ARB include scheduling taxpayer protest hearings, and record keeping duties associated with these hearings.

Ms. Clark will also be responsible for the preparation and posting of all meetings of the Board of Directors, The Appraisal Review Board, and the Ag Advisory Board.

Ms. Clark will also assist with data entry from property inspections as needed.

Bobbi Shepherd, RPA serves as the district's internal auditor. and records management coordinator. As the internal auditor, she will be responsible for periodically auditing the reappraisal worksheets generated by the appraisers as a result of their on-site inspections of real and personal property and the worksheets prepared to classify land by the land appraiser. She will also be responsible for insuring that the district's CAMA audit utility programs are ran regularly and corrected by the staff.

Ms. Shepherd also will also serve as the district's CAMA Data Manager. She will be responsible for the operations of the district's computer assisted mass appraisal (CAMA) system, including the generation of error edit reports and other reports to validate the districts appraisal data.

Dan Ralstin, RPA/CTA, as Senior Appraiser in the district, will oversee the operations of the district's appraisers.

Along with Mr. Ralstin, *Debbie Bowden,* a Class I appraiser trainee, will conduct on-site property inspections of improved real properties as scheduled or requested (by property owners).

They will collect data necessary to correctly classify land and structures according to the district's appraisal model.

Additionally, they will defend the district's values informally with taxpayers and present defense testimony for the district before the Appraisal Review Board. They will perform other appraisal tasks as assigned by the chief appraiser and his deputy.

They will be assisted in the performance of their duties by **Joe Barrow**.

Jason Moore, Class II Appraiser Trainee, an appraiser trainee, will be responsible for the review of all land parcels through examination of:

- aerial photography,
- topographical maps,
- soil classification maps for pasture, crops, and timberlands, and
- on-site inspections.

Mr. Moore will serve as the review appraiser for all property upon which an application for open space land valuation has been requested. He will be responsible for communicating with property owners regarding any actions regarding the special valuation in accordance with state law and the policies of the district.

Mr. Moore will be assisted by *Carol Clark* in the performance of these duties.

Sherry Nichols, RPA, serves as the district's personal property appraiser and will be responsible for appraising business personal property.

She will receive and review all rendition statements from business owners. She will perform field inspections on personal property parcels in order to validate the rendition statements.

She will be responsible for defending the district's values informally with taxpayers and formally by presenting defense testimony before the ARB. She will perform other appraisal tasks as assigned by the chief appraiser and his deputy.

Ms. Nichols will assisted by Verita Davis.

Brandon Glass will serve as an assistant to the appraisers. Mr. Glass' primary responsibilities will be to perform data entry from on-site inspection worksheets along with other data entry projects as assigned by the Chief Appraiser. Additionally, Mr. Glass will assist the appraisers with on-site inspection as needed as well as provide customer service in the front office as needed.

Melissa Marberry serves as the district's mapper. She is responsible for the maintenance of the district's maps as well as ownership changes to the appraisal roll. She also performs research regarding ownership issues. Ms. Marberry works under the direct supervision of Deputy Chief Appraiser **Don Awalt** who also serves as the Map Data Manager.

Desiree' Frasier will serve as the district's records management coordinator, under the direct supervision of the Chief Appraiser and the Deputy Chief Appraiser. In this capacity, Ms. Frasier will be responsible for the digital recording of all appraisal records, according to the district's record retention

schedules. *Verita Davis* will assist Ms. Frasier in the performance of her duties.

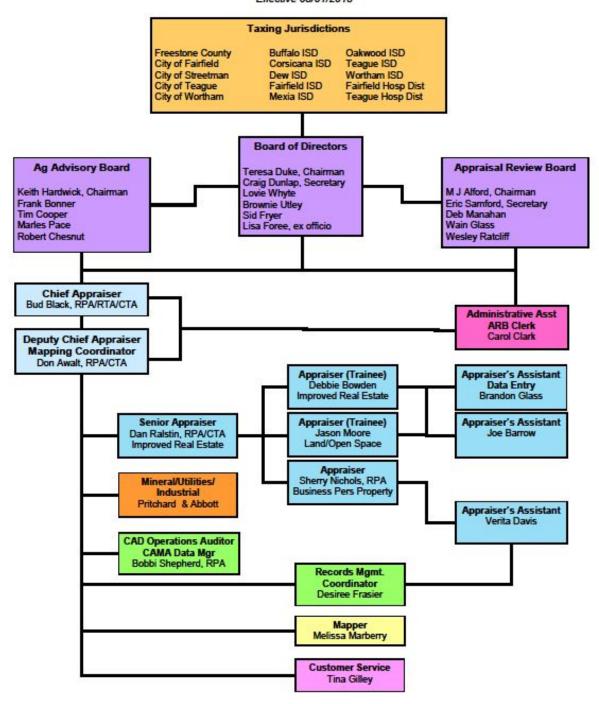

Additionally, Ms. Frasier will be responsible for fulfilling any public information requests for data or reports not easily produced from the CAMA system.

Tina Gilley will serve as the district's taxpayer service clerk. She will be responsible for the operations of the public area of the office. She will primarily assist the public with access to district records and maps, and will provide general information regarding exemptions, open space land appraisals, and other general information as requested by the general public.

Ms. Gilley will be responsible for the review of exemption applications received by the district. She will also prepare correspondence as necessary regarding those applications and complete other projects as assigned by the Chief Appraiser or the Deputy Chief Appraiser.

Addendum 1

Freestone CAD Organizational Chart Effective 08/01/2018

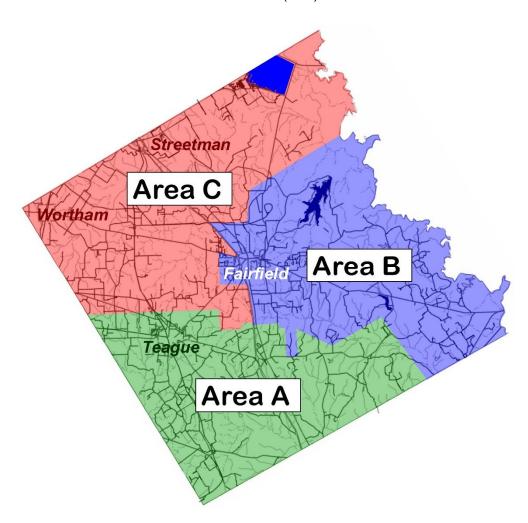

Addendum 2

Reappraisal Inspection Schedule

This district has been divided into three sections that allows approximately one-third of the district's total improved and unimproved real estate parcels to be reviewed annually. While the parcel count (for improved parcels) in each section is relatively equal, the acreage included in each section varies.

Generally, appraisers are scheduled to review property characteristics and perform on-site inspections according to the following schedule and as illustrated below:

- 2019 Area C (Red)
- 2020 Area A (Green)
- 2021 Area B (Blue)

Charts that include inspection schedules for improvements, land, and business personal property parcels are on the pages that follow.

S.B. 1652 BIENNIAL REAPPRAISAL PLAN

FOR THE ANNUAL APPRAISAL FOR
AD VALOREM TAX PURPOSES OF
MINERAL, INDUSTRIAL, UTILITY AND
RELATED PERSONAL PROPERTY

For Tax Years:

2019 and 2020

Originally Printed: June 13, 2018

To ensure adherence with generally screeped appraisal practices, the board of discussors of an appraisal district shall develop bienatelly a written plan for the periodic scappraisal of all property within the boundaries of the district scoording to the sequinaments of Section 25.58 and shall half a public bearing to consider the property plan. Not later than the 20th day before the date of the bearing, the scartney of the board shall delives to the proceeding officer of the governing body of each tening unit participating in the district a vertices notice of the date, time, and place for the bearing. Not later than September 15 of each even numbered year, the board shall complete its bearings, make any amendments, and by resolution theely approve the plan. Copies of the approval plan shall be distributed to the pushfully affect of the governing body of each tening unit participating in the district and to the comparation within 60 days of the approval date."

^{*}Senate Bill 1652 passed by the Texas Legislature, 79th Regular Session in 2005, amending Section 6.05 of the Texas Property Tax Code, adding Subsection (c) as follows:

POLICY STATEMENT OF PRITCHARD & ARBOTT, INC., UNDIE UNIFORM STANDARDS OF PROFESSIONAL APPRAISAL PRACTICE

Princhard & Abbatt, Inc., (P&A), a privately field contrary engaged primarity, but not wholly, in the ad valorem tax valuation industry endorses. Uniform Standards of Professional Appraisal Practice (USPAP) as the basis for the production of sound appraisals. Insofar as the statutory requirement to appraise <u>ecoups</u> (or a "universe") of real and personal projectly within an established period of time using standardized procedures—and subjecting the resulting appraisals to statistical measures—is the definition of mass appraisal, P&A subscribes to USPAP Standards 5 and 6 (Mass Appraisal, Development and Reporting) whenever applicable in the development and defense of values. When circumstances clearly dictate the use of single property appraisal procedures, P&A adheres to the spirit and intent of the remaining USPAP Standards within all appropriate, practical, and/or contractual Hultations or specifications.

The USPAP definition of "appraiser" is one who is expected to perform valuation services competently and in a manner that is independent, importing, and objective. USPAP Advisory Opinion 21 states that this expectation (by clients and intended users of appraisal reports) is the basis that creates an ethical obligation to comply with USPAP, even if not legally required.

The majority of property types that P&A typically appraises for ad valored tax purposes are entegorized as unique, complex, and/or "special purpose" properties (mineral interests, industrial, utility, and related personal property). These categories of properties do not normally provide sufficient market data of reliable quality and/or quantity to support the rigorous use of all USPAP-prescribed mass appraisal development mandates (Standard 5: Mass Appealsal, Development), particularly with regards to some, but not all, of the model calibration and statistical performance testing confines. However, P&A does strive to employ all or most elements of mass appraisal techniques with regards to the definition and identification of property characteristics and model macification and application.

Residential real estate property appraises most frequently apply mass appraisal methods within the sales comparison (market) approach to value. Through the use of standardized data collection (i.e., actual starket sales), specification and calibration of mass appraisal models, tables, and schedules are possible. Through ratio study analysis and other performance measures, a cumulative summery of valuation accuracy can thus he produced in order to calibrate the appraisal model(s). Where sufficient data of reliable quality exists, mass appraisal is also used for other types of real estate property such as farms, vacant lots, and some commercial uses (e.g., apartments, offices, and small retail).

Regarding mass appraisal reports due the client and other intended users per USPAP (Standard 6 (Mass Appraisal, Reporting), P&A will clearly state or otherwise make known all extraordinary assumptions, hypothetical conditions, limitations imposed by assignment conditions, and/or jurisdictional exceptions in its appraisal reports as they are conveyed to our clients. Intended users of our reports are typically the client(s) for which we are under direct contract. Although taxpayers or their ngents who own and/or represent the subject property being appraised often receive these reports either by law or as a courtesy of the client or P&A, this receipt does not mean these parties nutomatically become Intended Users as defined by USPAP. A party receiving a copy of a report in order to satisfy disclosure requirements does not become an intended user of the appraisal or mass appraisal unless the appraisal sideotifies such party as an intended user. Potential other users include parties involved in adjudiention of valuation disputes (review based members, lawyers, judges, etc.), governmental agencies which periodically review our appraisals for various statutory purposes (such as the Texas Comptroller's Office) and private parties who may obtain copies of our appraisals through Open Records Requests made to governmental agencies.

USPAP does not currently address communications of assignment results prior to complution of the assignment, thus such communications have no requirements other than to comply with the general requirements in the ETHICS RULE, the COMPETENCY RULE, and the JURISDICTIONAL EXCEPTION RULE. The client and all intended users should be aware that mass appraisals, as opposed to most "fee" appraisals, are somewhat inherently "limited" versus "complete" and that appraisal reports, unless otherwise contracted for by the client, will most often be of a "restricted" nature whereas explanations of appraisal methods and results are more concise versus lengthy in order to premote brevity, clority, and transparency to the Intended user(s).

Per USPAP, the appropriate reporting uption and level of information in a report are dependent on the intended use and the

Intended users. Although the reporting verifage in USPAP Standard 6 does not specifically offer or promulgate a "Restricted Approximal Renort" such as in Standard 2 (Real Property Appraisal, Reporting) and Standard 8 (Personal Property Appraisal, Reporting), it should be noted that: a) all mass approximate and mass approximal reports deal with real and personal property in some form or fashiom, and b) P&A is a private consciting firm, a fact which may necessitate the withholding of certain data and/or appraisal models/techniques which are deemed confidential, privileged and/or propertary in nature. The merit "Harted" appraisals in confidential in confidential and the individual with "Pestricted" reports in no year landies non-concliouse with USPAP. The substantive content of a report determines its committence.

P&A believes that, with its vast expensive and expensive in these areas of appraison, all conducted values and reports thereof are credible, competent, understandable, uniform and enricistent; and most importantly for ad value in a purposes, accomplished in a cost-efficient and timely manner.

Per previous ASB comments under Standard 6-2(b) [scope of work... special limiting conditions]:

"Although appreciates in ad outstant teaction about the held accountable for limitations beyond their control, they me required by this seed for requirement to identify control constraints and to take appropriate tops to secure sufficient funding to produce accounts that around with these strondards. Expenditure levels for assessment administration are a praction of a number of factors. Fixed constraints may impose anto completeness and accounts, valuation matterial, and valuation accounts. Although appealers should seek adequate funding and disclose the suspect of faces constraints on the mass appraisal process. They are not responsible for constraints beyond their control."

Impny event, however, it is not PALA's intent to allow construirts, (Read or otherwise, to limit the scope of work to such a degree that the mass appraisal results provided to our otients are not credible within the context of the intended ose(a) of the appraisal.

PREAMBLE

The purpose of USPAP is to establish requirements and conditions for ethical, thorough, and transparent property valuation services. Valuation services period to all aspects of property value and include services performed by appraisars and other professionals including phomeys, accountants, insurance estimators, auctioneers, or beckers. Valuation services include appraisal, appraisal review, and appraisal consulting. The primary intent of these Standards is to promote and maintaintain a high tevel of public trust in professional appraisal practice.

It is essential that professional appraisers develop and communicate their analyses, opinions, and conclusions to intended users of their services in a manner that is meaningful and not misloading. The importance of the role of the appraiser places officed obligations upon those who serve in this capacity. These USPAP Standards reflect the current standards of the appraisal profession.

These Standards are for both appraisers and users of appraisal services. To maintain a high level of professional practice, appraisers observe these Standards. However, these Standards do not in themselves establish which individuals or assignments must comply. The Appraisal Foundation not its Appraisal Standards Board is not a government entity with the power to make, judge, or enforce law. Compliance with USPAP is only required when either the service or the appraiser is obligated to comply by law or regulation, or by agreement with the client or intended users. When not obligated, individuals may still choose to comply.

USPAP addresses the ethical and performance obligations of appraisers through DEFINITIONS, Rules, Standards, Standards Rules, and Statements (if any). USPAP Standards deal with the procedures to be followed in performing an appraisal or appraisal review and the manner in which each is communicated. A brief description of the USPAP Standards are as follows:

- Standards Rules 1 and 2: establish requirements for the development and communication of a real property appraisal.
- Standards Rulus 3 and 4: establishes requirements for the development and communication of an appraisal review.
- Standards Rules 5 pgd 6: establishes requirements for the development and communication of a mass appraisal.
- Standards Rules 7 and 8: establish requirements for the development and communication of a personal property approxisal.
- Standards Rules 9 and 10: establish requirements for the development and communication of a business or intangible
 asset appraisal.

Section 23.01(b) [Approximals Generally] of the Texas Property Tax Code states:

"The market value of property shall be determined by the application of generally accepted approximal methods and techniques. If the Approximal District determines the approximal value of a property using mast approximal standards, the mass approximal standards must comply with the Uniform Standards of Projectional Approximal Practice...." (underline added for emphasis)

Consequently, USPAP Standards Rules 5 and 6 are assumed to be the applicable standard for ad volcrem tax purposes in Texas, if mass appraisal practices are in fact being used to appraise the subject property. USPAP Advisory Opinion 32 suggests several USPAP standards other than Standards 5 or 6 can or should apply in ad valorem tax work. However, it appears that an appraisar engaged in ad valorem tax work in Texas is not specifically required by law to fullow these USPAP standards if in fact mass appraisal practices have not been used to approvise the subject property. In this case it could be deemed appropriate to invoke the Jurisdictional Exception Rule which is applicable when there is a contradiction between the requirements of USPAP and the law or regulation of a jurisdiction. Please see the P&A Policy Statement on USPAP as provided elsewhere in this report for a more detailed discussion regarding this matter.

ETHICS RULE

Because of the fiduciary responsibilities inherent in professional appraisal practice, the appraiser must observe the highest standards of professional ethics. This Ethics Rule is divided into three sections:

- Conduct:
- Monagement;
- Confidentiality.

This Rule emphasizes the personal obligations and responsibilities of the individual appraiser. However, it should be noted that groups and organizations which are comprised of individual appropers engaged in appraisal practice effectively share the same ethical obligations. To the extent the group or organization does not follow USPAP Standards when legally required, individual appraisers should take steps that are appropriate under the circumstances to ensure compliance with USPAP.

Compliance with these Standards is required when either the service or the approiser is obligated by low or regulation, or by agreement with the elient or intended users, to comply. Compliance is also required when an individual, by choice, represents that he or she is performing the service as an approiser.

An appraiser must not misrepresent his or her role when providing valuation services that are outside of appraisal practice.

Honesty, importiality, and professional competency are required of all approisers under USPAP Standards. To document recognition and acceptance of his or her USPAP-related responsibilities in communicating an appraisal or appraisal review completed under USPAP, an appraisar is required to cortify compliance with these Standards.

CONDUCT

An appraiser must perform assignments with impartiality, objectivity, and independence, and without accommodation of personal interests.

Ait appraiser.

- must not perform an assignment with bias;
- must not advocate the cause or interest of any party or issue;
- must not necept an assignment that includes the reporting of predetermined opinions and conclusions;
- must not misrepresent his or her role when providing valuation services that are outside of appraisal practice;
- must not communicate assignment results with the intent to mislead or to defraud;
- must not use or communicate a report or assignment results known by the appraiser to be misleading or fraudulent;
- must not knowingly people an employee or other person to communicate a report or assignment results that are mislending or fraudulent report;
- must not use or rely on unsupported conclusions relating to characteristics, such as nose, color, religion, national
 origin, gender, marital status, familial status, age, receipt of public assistance income, handicap, or an unsupported
 conclusion that bomogeneity of such characteristics is necessary to maximize value;
- must not engage in orbibial conduct,
- must not willfully or knowingly violate the requirements of the RECORD KEEPING RULE; and must not perform an assignment in a grossly negligent manner.

If known prior to accepting an exignment, and/or if discovered at any time during the assignment, an appraiser must disclose to the client, and in each subsequent report pertification:

- any current or prospective interest in the subject property or parties involved; and
- any services regarding the subject property performed by the appraiser within the three year period immediately
 preceding acceptance of the assignment, as an appraiser or in any other capacity.

The appraiser can agree with the elient to keep the more occurrence of a prior appraised assignment confidential. If an appraiser has agreed with the ellent not to disclose that he or she has appraised a property, the appraiser must decline all subsequent assignment that fall with the three year period. In assignments in which there is no report, only the initial disclosure to the elient in required.

Presumably all parties in ad valorem tax appraisal will be aware of the ongoing yearly nature of the appraisal assignments performed by valuation consulting firms like Pritchard & Abbott, Inc. — i.e., it will not be confidential — so that this particular conduct instruction is more or less a most point (regording the three year period discussed) if the prior service is in fact the ad valorem tax appraisals performed in previous tax years.

MANAGEMENT

The payment of a fee, commission, or a thing of value <u>by the anomiser</u> in connection with the procurement of an axxignment must be disclosed. This disclosure must appear in the certification and in any transmittal letter in which conclusions of value are stated; however, the disclosure of the amount paid is not required. Intra-company payments to employees of groups or organizations invulved in appraisal practice for business development do not require disclosure.

It is unelined for an appraiser to accept compensation for performing an assignment when it is contingent upon the reporting of a predetermined result, a direction in assignment results that favors the cause of the client, the amount of a value upinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the appraiser's opinions and specific to the assignment's purpose.

Advertising for or soliciting assignments in a manner that is false, mislending, or exaggerated is unethical. Decisions regarding finder or referral fees, contingent compensation, and advertising may not be the responsibility of an individual appraiser, but for a particular assignment it is the responsibility of the individual appraiser to ascertain that there has been no breach of ephics, that the assignment consulting assignment has been prepared in accordance with USPAP Standards, and that the report can be properly certified when required by USPAP Standards Rules 2-3, 3-3, 5-3, 6-9, 8-2, or 10-3.

An appraison must affix, or authorize the use of, his or her signature to certify recognition and acceptance of his or her USPAP responsibilities in an appraisal or appraisal review assignment. An appraiser may authorize the use of his or her signature only on an assignment-by-assignment basis.

to addition, an appraiser must not affix the signature of another appraiser without his or her consent. An appraiser must exercise due core to prevent unauthorized use of his or her signature. However, an appraiser exercising such core is not responsible for unauthorized use of his or her signature.

CONFIDENTIALITY

An appraisor must protect the confidential nature of the appealace-property owner relationship.

An appraiser must act in good faith with regard to the legitimate interests of the client in the use of confidential information and in the communication of assignment results.

An appraiser must be aware of, and comply with, all confidentiality and privacy laws and regulations applicable in an assignment.

An appraiser must not disclose confidential factual data obtained from a property owner to anyone other than:

- The client;
- Parties specifically authorized by the client;
- State apprniser regulatory agencies;
- 4. Third parties as may be authorized by due process of law; or
- 5. A duly authorized professional peer review committee except when such disclosure to a committee would violate

applicable low or regulation.

As appealser must take reasonable steps to safeguard access to confidential information and assignment results by unouthorized individuals, whether such information or results are in physical or electronic form. In addition, no appeals or must ensure that employees, co-workers, sub-confractors, or others who may have access to confidential information or assignments results, are aware of the prohibitions on disclusions of such information or results.

It is unermical for a member of a duly authorized processional peer review committee to disclose confidential information presented to the committee.

When all confidential elements of confidencial information are removed through recaction or the process of aggregation, client authorization is not required for the disclosure of the remaining information, so modified.

RECORD KREPING RULE

An appraison must peoplare a workfile for each appraisal or appraisal review assignment. A workfile must be in existence prior to the issuance of any report or other communication of assignment results. A written summary of an oral report must be added to the workfile within a reasonable time after the issuance of the oral report.

The worldile must include the name of the client and the identity, by name or type, of any other intended users, and true copies of all written reports, documented on any type of media. (A true copy is a replica of the report transmitted to the client. A photocopy or an electronic copy of the entire report transmitted to the client satisfies the requirement of a true enpy.) A workfile must contain summaries of all oral reports of testimony, or a transcript of testimony, including the appraiser's signed and dated certification; and all other data, information, and documentation necessary to support the appraiser's opinions and conclusions and in slaws campliance with USPAP, or references to the location(s) of such other data, information, and documentation.

A workfile in support of a Restricted Appraisal Report or an orol appraisal report must be sufficient for the appraisal to produce an Appraisal Report. A workfile in support of an oral appraisal review report must be sufficient for the appraisant opposition and Appraisal Review Report.

An appearance must retain the workfile for a period of at least five years after preparation or at least two years after final disposition of any judicial proceeding in which the appraiser provided testimony related to the assignment, whichever period expires last.

An appraiser must have custody of the workfile, or make appropriate workfile retention, access, and retrieval arrangements with the purty having custody of the workfile. This includes ensuring that a workfile is stored in a medium that is retrievable by the appraiser throughout the prescribed record retention period. An appraiser having custody of a workfile must allow other appraisers with workfile obligations related to an assignment appropriate access and retrieval for the purpose of:

- sithmission to slate approiser regulatory agencies;
- compliance with one process of law;
- submission to a duly mutharized professional peer review committee; or
- compliance with resileval arrangements.

A workfile must be made available by the approiser when required by a state approiser regulatory agency or due process of law.

An appraiser who willfully or knowingly falls to comply with the obligations of this Record Keeping Rule is in violation of the Ethras Rule.

SCOPE OF WORK RULE

For each appraisal or appraisal review assignment, an oppraiser must:

- Identify the problem to be salved;
- 2. Determine and perform the scope of work necessary to develop credible assignment results; and
- 3. Disclose the scape of work in the report.

An appraiser must properly identify the problem to be solved in order to determine the appropriate scope of work. The appraiser must be prepared to demonstrate that the scope of work is sufficient to produce credible assignment results.

Scope of work includes, but is not limited to:

- the extent to which the property is identified;
- the extent to which tangible property is inspected;
- the type and extent of data researched; and
- the type and extent of analyses applied to arrive at opinions or conclusions.

Appraisers have broad flexibility and significant responsibility in determining the appropriate scope of work for an appraisal or appraisal review assignment. Credible assignment results require support by relevant evidence and logic. The credibility of assignment results is always measured in the context of the intended use.

PROBLEM IDENTIFICATION

An appraiser must gather and analyze information about those assignment elements that are necessary to properly identify the appraisal, appraisal review or appraisal consulting problem to be solved. The assignment elements necessary for problem identification are addressed in the Standards Rule 6-2:

- client and any other intended users;
- intended use of the appraiser's opinions and conclusions;
- type and definition of value;
- effective date of the appraiser's opinions and conclusions;
- subject of the assignment and its relevant characteristics; and
- essignment conditions.

This information provides the approiser with the basis for determining the type and extent of research and analyses to include in the development of an approisal. Similar information is necessary for problem identification in approisal review and appraisal consulting assignments. Assignment conditions include:

- Basumptiona;
- extraordinary assumptions;
- hypothetical conditions;
- laws and regulations;
- jurisdictional exceptions; and
- other conditions that affect the scope of work.

SCOPE OF WORK ACCEPTABILITY

The scope of work must include the research and analyses that are necessary to develop credible assignment results. The scope of work is acceptable when it meets or exceeds:

- the expectations of parties who are regularly intended users for similar assignments; and
- what an appealsor's poors' actions would be in performing the same or a similar assignment.

Determining the scope of work is an ongoing process in an assignment. Information or conditions discovered during the course of an assignment inight cause the appraisant a reconsider the scope of work. An appraisant must be prepared to support the decision to exclude any investigation, information, method, or teclarique that would appear relevant to the client, another intended user, or the appraisant's poors.

An appraiser must not a low assignment conditions to limit the scope of work to such a degree that the assignment results are not credible in the context of the intended use. In addition, the approximent must not allow the intended use of as assignment or a client's objectives to cause the assignment results to be binsed.

DISCLOSURE OBLIGATIONS

The report must contain sufficient information to allow intended users to understand the scope of work performed. Proper disclosure is required because clients and other intended users may rely on the assignment results. Sufficient information includes disclosure of research and analyses performed or not performed.

JURISDIC TRONAL EXCEPTION RULE

If any applicable law or regulation precludes congulance with any part of USPAP, only that our of USPAP becomes void for that assignment. When compliance with USPAP is required by federal law or regulation, no part of USPAP can be voided by a law or regulation of a state or local jurisdiction. When an appraisan property follows that Rule in disregarding a part of USPAP, there is no miniation of USPAP.

In an assignment involving a juristhictional exception, an approise must

- Identify the law or regulation that produces compliance with USPAP;
- comply with that law or regulation;
- clearly and conspicuously disclose to the report the part of LibPAP that is veided by that law or regulation; and
- ofte in the report the law or regulation requiring this exception to USPAP compilance.

The purpose of the Jurisdictions. Exception Rule is strictly limited to providing a saving or severability clause intended to preserve the balance of USPAP if one or more of its pans are determined as contrary to law or public policy of a jurisdiction. By legical extension, there can be no violation of USPAP by an appreciac who disregards, with proper disclosure, only the part or parts of USPAP that are void and of no force and offert in a particular assignment by operation of legal authority.

It is misleading for an approiser to disregard a part or parts of USPAP as very end of on force and effect or a particular assignment without identifying the part or parts disregarded and the legal authority justifying this action in the appraiser's report.

"Easy" in studies constitutions, legislative and opert-peole law, and administrative rules (such as from the Office of the Texas Compredict of Public Accounts) and ordinances. "Regulations" include rules of orders baving legal force, issued by unadministrative agency. Instructions from a client or attorney do not establish a juriscictional execution.

A jurisdictional exception provatent in Texas is that upper issue are seeking to establish "bit market value" as defined by the Texas Property Tax Code instead of "market value" as found in the USPAP definitions section.

USPAP STANDARDS 5 AND 6: MASS APPRAISAL, DEVELOPMENT AND REPORTING (General Discussion)

In developing a mass appraisal, an appraiser must be aware of, understand, and correctly employ those recognized methods and techniques recessory to produce and communicate credible mass appraisals.

Standards 5 and 6 apply to all mass appraisals of roal and personal property regardless of the purpose or use of such appraisals. It is directed inward the substantive aspects of developing and communicating competent analyses, opinions, and conclusions in the mass appraisal of properties, whether real property or personal property. Standard 5 is directed toward the substantive aspects of developing credible analyses, opinions, and conclusions in the mass appraisal of properties, while Standard 6 addresses the content and level of information required in a report that communicates the results of a mass appraisal. The reporting and jurisdictional exceptions applicable to public mass appraisals prepared for purposes of advalorem taxation do not apply to mass appraisals prepared for other purposes.

A mass appraisal includes:

- identifying properties to be appraised;
- defining market greas of consistent behavior that applies to properties;
- identifying characteristics (supply and demand) that affect the creation of value in that market area;
- developing (specifying) a model senicture that reflects the relationship among the characteristics inflecting value in the market area;
- calibrating the model structure to determine the contribution of the individual characteristics affecting value;
- applying the conclusions reflected in the model to the characteristics of the properties being approised; and
- reviewing the mass approisal results.

The Jurisdictional Exception Rule may apply to several sections of Standards 5 and 6 hecture advances tax administration is subject to various state, county, and municipal laws.

As proviously stated in the P&A Policy Statement (page 2), it may not be possible or principable for all the mass appraisal extributes listed above to be algorously applied to the many types of complex and/or unique properties that P&A typically appraises. Often there are contractual fluttations on the scope of work needed or required. More prevalently, these types of properties do not normally provide a reliable database of market transactions (or details of transactions) necessary for statistically supportable calibration of appraisal models and review of appraisal results. Generally these two functions are effectively accomplished through annual extended review meetings with laxpayers (and clients) who provide data, sometimes confidentially, that allows for appraisal models to be adjusted where necessary. Nevertheless, and not withstanding whether P&A implicitly or explicitly employs or reports all attributes listed above, in all cases P&A at the minimum employs tenants of "generally accepted appraisal methods" which are the genesis of USPAP Standards.

Per USPAP guidelines, P&A will make known all departures and jurisdictional exceptions when invoked (if an approisal method or specific requirement is applicable but not necessary to artain credible results in a particular assignment).

The various sections of Standard 5 (development of mass appraisal) and Standard 6 (communication of the mass appraisal results) are briefly summarized below:

Standard 5-1: Establishes the appreiser's technical and ethical framework. Specifically, approisers must recognize and use established principles, methods and techniques of appraisal in a careful number while not committing substantial errors of fact or negligence that would materially affect the appraisal results and not give a credible estimate of fair market value. To this end appraisers must continuously improve his or her skills to maintain proficiency and keep abrenst of any new developments in the real and personal property appraisal profession. This Standards Rule does not imply that competence requires perfection, as perfection is impossible to starin. Instead, it requires appraisers to employ every reasonable effort with regards to due diligence and due ears.

- Standard 5-2: Defines the introductory framework requirements of developing a mass appraisal, focusing on the identification and/or definition of: client(s), intended users, effective date, appraisal perspective, scope of work, extraordinary assumptions, hypothetical conditions, the type and definition of value being developed (typically "fair market value" for ad valuement as purposes), characteristics of the property being appraised in relation to the type and definition of value and intended use, the characteristics of the property's market, the property's real or personal attributes, fractional interest applicability, highest and best use analysis along with other land-related considerations, and any other connomic considerations relevant to the property.
- <u>Stundard 5-3</u>: Defines requirements for developing and specifying appropriate mass appraisal data and elements applicable for real and personal property. For real property, the data and elements include: existing land use regulations, reasonably probable modification of such regulations, economic supply and demand, the physical adaptability of the real estate, neighborhood trends, and highest and best use analysis. For personal property, the relevant data and elements include: identification of industry trends, trade level, highest and best use, and recognition of the appropriate market consistent with the type and definition of value.
- Standard 5-4: Further defines requirements for developing most appraisal models, focusing on development of standardized data collection forms, procedures, and training materials that are used uniformly on the universe of properties under consideration. This rule specifies that appraisers employ recognized techniques for specifying and calibrating mass appraisal models. Model specification is the formal development of a model in a statement or mathematical equation, including all due considerations for physical, functional, and external market factors as they may affect the appraisal. These models most occurriely represent the relationship between property value and supply and demand factors, as represented by quantitative and qualitative property characteristics. Models must be collibrated using recognized techniques, including, but not limited to, multiple linear regression, northinear regression, and adaptive estimation. Models may be specified incorporating the income, market, and/or cost approaches to value and may be tabular, mathematical, linear, nonlinear, or any other structure suitable for representing the observable property characteristics such as adaptive estimation. Model calibration refers to the process of analyzing sets of property and market data to determine the specific parameters of a model.
- Standard 5-5: Defines requirements for collection of sufficient factual data, in both qualitative and quantitative tents, recessary to produce credible appraisal results. The property characteristics collected must be contemporaneous with the effective date of the appraisal. The data collection program should incorporate a quality control procedure, including checks and audits of the data to ensure current and consistent records. This rule also calls for calls for an appraiser, in developing luconic and expense statements and cashflow projections, to weigh historical information and trends, current market factors affecting such trends, and reasonably anticipated events, such as computition from developments either planned or under construction. Terms and conditions of any leases should be analyzed, as well as the need for and extent of any physical inspection of the properties being appraised.
- Standard 5-6: Defines requirements for application of a calibrated model to the property being appraised. This rule calls for: the appraiser to recognize methods or usebulques based on the cost, market, and income approaches for improved percels; the appraiser to value sites by recognized methods or techniques such as allocation method, abstraction method, capitalization of ground rent, and land residual; the appraiser to develop value of leased fee or leasehold eatetes with consideration for terms and conditions of existing leases, and, when applicable by law, us if held in fee shaple whereas market rents are substituted for actual contract rents; the appraiser to analyze the effect on value, if any, of the assemblage of the various parcels, divided interests, or component parts of a property; the appraiser to analyze unticipated public or private improvements located on or off the site, and analyze the effect on value, if any, of such anticipated improvements to the extent they are reflected in market actions.
- Standard 5-7: Defines the reconciliation process of a mass appraisal. Specifically, appraisers must analyze the results and/or applicability of the various approaches used while ensuring that, on an overall basis, standards of reasonableness and accuracy are maintained with the appraisal model selected (underline added for emphasis). It is implicit in mass appraisal that, even when properly specified and calibrated models are used, some individual value conclusions will not meet standards of reasonableness, consistency, and accuracy. Appraisors have a professional responsibility to ensure that, on an overall basis, models produce value conclusions that meet attainable standards of accuracy.

- Standard 6-1: Defines requirements of a mass approach written report by addressing the content and level of
 information required in a report that communicates the results of a mass approach (elements of which are further detailed
 in the next three sections of this report that discuss P& A approach procedures with regards to specific categories of
 property).
- Standard 6-2: Defines requirements for appraise positionalism of the mais appraisal written report.

The fallowing specimes of this report discuss in detail the various elements of the mass approximate report as required by USPAP Standard 5-1, with regards to P&A appraise of fytineral Interests, Industrial-Utility-Personal Property, and Real Estate.

HISPAP STANDARDS RIFLE 6-1: MASS APPRAISAL OF MINERAL INTERESTS

Note: This section, in confunction with any attached or separately provided P&A-generated appraisal reports specific to the subject property or properties, constitutes the "mass approisal written report" as regulated by USPAP Standards Rule 6-2 (certification) can be found at the end of this report. USPAP Standards Rules 5-1 directions and explanations regarding the development, application, and reconciliation of mass approisal values), as they apply to P&A mass approisal procedures, are discussed below. USPAP DOES NOT DICTATE THE FORM, FORMAT, OR STYLE OF APPRAISAL REPORTS, WHICH ARE FUNCTIONS OF THE NEEDS OF USERS AND PROVIDERS OF APPRAISAL SERVICES. USPAP ALSO DOES NOT MANDATE THAT EACH APPRAISAL REPORT BE LENGTHY AND FULL OF CYSCLAIMERS. Readers should mate that all P&A repairs, unless stated atherwise, one of a "restricted" nature whereas additional documentation and detail may be available per certain Toxas Property Tax Code provisions.

INTRODUCTION

<u>Definition of Approisal Responsibility (Scope of Biffort)</u>: The Mineral Valuation Department of Pritchard & Abbert, Inc. ("P&A" hereinaffer), is responsible for developing credible values for mineral interests (full or fractional percentage ownership of oil and gas leasehold interest, the amount and type of which are legally mad/or contractually created and specified through deeds and leases, et.al.) associated with producing (or capable of producing) leases. Mineral interests are typically considered real property because of their derivation from the bundle of rights associated with original fee simple ownership of land. Typically all the minural interests that apply to a single producing lease are consolidated by type (working vs. royalty) with each type then appraised for full value which is then distributed to the various fractional decimal interest owners promise to their individual type and percentage amount.

P&A's typical client is a governmental entity charged with appraisal responsibility for ad valorem lex purposes, although other types of clients (private businesses, individuals, etc.) occasionally contract for appraisal services which are strictly for various non-ad valorem tax purposes so that no conflicts of interest are created with P&A's core ad valorem tax work.

P&A hereby makes the assumption that, in all appraisal assignments performed for governmental entities in satisfaction of contractual obligations related to ad volument tax , the client does not wish to or cannot legally request the appraisal report not identify the client.

Intended users of our reports are typically the client(s) for which we are under direct contract. Although taxpayers or their agents who own mod/or represent the subject property being appraised often receive these reports either by law or as a corresp of the client or P&A, this receipt does not mean these partles automatically become Intended Users as defined by USPAP. A party receiving a copy of a report in order to safisfy disclosure requirements does not become un intended user of the appraisal or mass appraisal orders the approiser specifically identifies such party as an intended user. Potential other users include parties involved in adjudication of valuation disputes (review beard members, Inwyers, judges, etc.), governmental agencies which perindically review our appraisals for various statutory purposes (such as the Texas Comptrofler's Office) and private parties who may obtain copies of our appraisals through Open Records Requests made to governmental agencies.

This section of P&A's USPAP report is not opplicable to any nineral or nineral interest property that an approisal district appraisal of P&A's appraisal services, in which case the appraisal district's overall USPAP report should be referenced.

P&A makes the Extraordinary Assumption that all properties appraised for ad valurem tax purposes are marketable whereas ownership and title to property are free of encumbrances and other restrictions that would affect fair market value to an extent use obvious to the general marketplace. If and/or when we are made aware of any encumbrances, etc., these would be taken into account in our appraisal in which case the extraordinary assumption stated above would be revoked.

PACA is typically under contract to determine <u>current</u> market value or "fair market value" of said minoral interests. Fair market value is typically described as the price at which a property would self for if:

- exposed in the open market with a reasonable time for the seller to find a purchaser,
- both the buyer and seller know of all the uses and purposes to which the property is, or can be, adapted and of the
 enforceable restrictions on its use: and
- both the boyer and seller seek to maximize their gains and reither is in a position to take advantage of the exigencies
 inf the other. [Exigencies are prexsing or organic conditions that leave one party at a disadvantage to the other.]

For ad valorem (ax purposes the effective date is usually legislatively specified by the particular State in which we are working - for example, in Toxas the tien date is January 1 per the Toxas Property Tixx Code. For ad valorem has purposes, the date of the appraisals and reports are sypically several months pest the effective date, thereby leaving open the possibility that a <u>retrospective</u> approach is appropriate under limited and prescribed circumstances (information after the effective date heing applicable only if it confirms a trend or other approximal candition that existed and was generally known as of the effective date).

P&A believes this section of this report, in conjunction with any netached or separately provided P&A-generated report(x), meets the USPAP definition of "typical practice"; i.e., it satisfies a level of work that is consistent with:

- the expectations of participants in the market for the same or similar appraisal services; and
- what P&A's peers' actions would be in performing the same or shallar appraisal services in compliance with USPAP.

Legal and Statutory Requirements: In Texas, the provisions of the Texas Property Tax Code and other relevant legislative measures involving appraisal administration and procedures control the work of P&A as an extension of the Appraisal District. Other states in which P&A is employed will have similar controlling legislation, regulatory agencies, and governmental entities. P&A is responsible for appraising property on the basis of its fair market value as of the statest effective date (January 1 In Texas) for ad valorem tax purposes for each texing unit that imposes advelorem taxes on property in the contracted Appealsal District. All mineral properties (interests) are reappraised annually. The definition of Fair Market Value is provided and promulgated for use in ad valorem tax work in Texas by the Texas Property Tax Code, and therefore as a Jurisdictional Exception supercedes the definition of "market value" as found in USPAP definitions.

NOTE: IN TEXAS, P&A BELIEVES THE PROPERTY BEING APPRAISED AND PLACED ON THE TAX AOLL IS THE <u>INTEREST</u> AND NOT THE OIL OR GAS MINERAL ITSELF, PER PROPERTY TAX CODE SECTION 1.04(2)(F). While oil and gas reserves certainly have value, the fact is that it is the interests in these minerals that are bought and sold, not the minerals themselves. The sale of minerals as they are extracted from the subsurface of the land where they reside as minerals in place "monetizes" the interest and thus gives the interest its value. Whenever P&A refers to "meneral properties" in this report or in any other setting, it is the mineral interest, and not the mineral itself, that is the subsidict of the reference.

Administrative Requirements: P&A endorses the principals of the International Association of Association Officers (IAAO) regarding its appraisal practices and procedures. P&A also endorses, and follows when possible, the standards probulgated by the Approisal Poundation known as the Uniform Standards of Professional Approisal Practice (USPAP). In all cases where IAAO and/or USPAP requirements cannot be satisfied for reasons of practicality or irrelevancy, P&A subscribes to "generally accepted appraisal methods and (cohniques" so that its value conclusions are credible and defendable. P&A submits annual or biautual contract bids to the Appraisal District Board of Directors or the Office of the Chief Appraiser and is bound to produce appraisal estimates on mineral proporties within the cost constraints of said bid. Any appraisal practices and procedures followed by P&A not explicitly defined or allowed through IAAO or USPAP requirements are specified by the Texas Property Tax Code or at the specific request or direction of the Office of the Chief Appraiser.

Appraisal Resources

<u>Personnel</u>: The Mineral Valuntion Division staff consists of competent Petroleiun Engineers, Geologists, and Appraisers. All personnel are Registered Professional Appraisers with the State of Texas, or are progressing towards this designation within the allowable time frames prescribed by the Texas Department of Licensing and Regulation (TDLR) and/or other Recusing and regulatory agencies as applicable.

Data: For each mineral property a common set of data characteristics (i.e. historical production, price and exputes data) is collected from various sources and exputes data is collected from various sources and exputes data and price data is available through state agencies (Texas Rattroad Commission, Texas Comptroller, et al.) or private from who gather, format and reportage such data for sale commercially. Each property's characteristic data drives the computer-assisted mass appraisal approach to valuation.

<u>Information Systems</u>: The mainframe systems are augmented by the databases that serve the various in-house and 3rd-party applications on desktop personal computers. In addition, communication and dissemination of appraisals and other information is available to the toxpuyer and elient through electronic means including internet and other phone-line connectivity. The appraiser supervising any given contract fields many of the public's questions or rederects them to the proper department personnel.

VALUATION APPROACH (MODEL SPECIFICATION)

<u>Concepts of Value</u>: The valuation of oil and gas properties is not an exact science, and exact accuracy is not attainable due to many factors. Nevertheless, standards of reasonable performance do exist, and there are usually reliable means of measuring and applying these standards.

Petroleum properties are subject to depletion, and capital investment must be returned before economic exhaustion of the resource (mineral reserves). The examination of petroleum properties involves understanding the geology of the resource (producing and non-producing), type of reservoir energy, the methods of secondary and enhanced resovery (if applicable), and the surface treatment and marketability of the produced petroleum product(s).

Evaluation of mineral properties is a continuous process; the value as of the lieu date merely represents a "snapshot" in time. The patential value of mineral interests derived from sale of other also be extracted from the ground change with mineral price fluctuation in the open market, changes in extraction technology, costs of extraction, and other variables such as the value of money.

Approaches to Value for Petroleum Property

Cost Approach: The use of east data in an appraisal for market value is based upon the content opticiple of substitution. The cost approach typically derives value by a model that heghs with replacement cost new (RCN) and then applies depreciation in all its forms (physical depreciation, functional and economic obsolescence). This method is difficult to apply to oil and gas properties since lease acquisition and development may bear no relation to present worth. Though very useful in the appraisal of many other types of properties, the cost approach is not readily applicable to mineral properties. [Keep in mind that the property actually being appraised is the mineral interest and not the oil and gas reserves themselves. Trying to apply the cost approach to lead, it is a most point because both are real properties that are inherently requireplaceable.] As a general rade, and for the reasons stated above, Pritebard & Abbott, Inc., does not employ the cost approach in the appraisal of mineral interests.

Market Approach: This approach may be defined as one which uses data available from actual transactions recorded in the market place itself; i.e., sales of comparable properties from which a comparison to the subject property can be made. Identity, this approach's main advantage involves not only an opinion but an opinion supported by the actual spending of money. Although at first glance this approach seems to more closely incorporate the aspects of fair market value per its classical definition, there are two factors that severely limit the usefulness of the nurket approach for appraising all and gas properties. First, oil and gas property sales date is seldom disclosed (in non-disclosure states such as Texas); consequently there is usually a severe tack of market data sufficient for meaningful statistical analysis. Second, all conditions of each sale

must be known and carefully investigated to be sure one dies have a comparative indicator of value per fair market value perquisites.

Many times when these properties do change hands, it is generally through company mergers and acquisitions where other assets in addition to all and gas reserves are involved; this further complicates the analysis whereby a total purchase price must be allocated to the individual components - a speculative and semewhat arbitrary task at best. In the case of oil and gas properties, a searcity of sales requires that every evidence of market data be investigated and analyzed. Factors relative to the sale of oil and gas properties are:

- corrent production and estimated declines forecast by the hover;
- estimated probable and potential reserves;
- general lease and legal information which defines privileges or limitation of the equity sold;
- undeveloped potential such as secondary recevery prospects;
- proximity to other production already operated by the purchaser;
- contingencies and other cash equivalents; and
- other factors such as size of property, gravity of oil, etc.

In the event that all these factors are available for analysis, the consensus effort would be tantamount to performing an income approach to value (or trying to duplicate the buyer's income approach to value), thereby making the market approach somewhat most in its applicability. As a general rule, and for the reasons stated above, Pritchard & Abbott, Inc., rarely couplings a rigorous application of the market approach in the appraisal of mineral interests.

<u>Income Approach</u>: This approach to value most readily yields itself to the approisal of mineral intenests. Data is readily available whereby a model can be created that reasonable estimates a future income stream to the property. This future income may then be converted (discounted) into an estimate of current value. Many refer to this as a capitalization method, because capitalization is the process of converting an income stream into a capital sum (value). As with any method, the final value is no better than the cellability of the input data. The underlying assumption is that people purchase the property for the future income the property will yield. If the land or improvements are of any residual value after the cessation of oil and gas production, that value should also be included (if those components are also being appraised).

The relevant income that should be used is the expected future net income. Assumptions of this method are:

- Past income and expenses are not a consideration, except insofar as they may be a guide to estimating future not income.
- That the producing life as well as the reserves (quantity of the minerals) are estimated for the property.
- Future income is less valuable than current income, and so future not income must be discounted to make it
 equivalent to the present income. This discount factor reflects the premium of present money over future money,
 i.e., interest rate, liquidity, investment management, and risk.

As a general rule, and for the reasons stated above, Pritchard & Abbott, Inc., relies predominantly on the income approach to value in the appraisal of minteral interests.

DATA COLLECTION/VALIDATION

Sources of Data: The main source of P&A's property data is data from the Railroad Commission of Texas as reported by operators. As a monthly activity, the data processing department receives data tapes or electronic files which have updated and new well and production data. Other discovery tools are fieldwork by appraisers, financial data from operators, information from chief appraisers, tax assessors, trade publications and other useful facts related to property valuation.

Another ensoial set of data to obtain is the ownership of these mineral interests. Typically a mineral lease is functionated and executed with several if not many owners. This information is typically requested (under a promise of confidentiality concerning owners' personal information) from pipeline purchasers and/or other entities (such as operators) who have the

responsibility of disbursing the income to the mineral interest owners. Another source of ownership information is through the taxpayers themselves who file deeds of ownership transfer and/or correspond with P&A or the approximation district directly.

Date Collection Procedures: Electronic and field data collection requires organization, planning and supervision of the appraisal staff. Data collection procedures for mineral properties are generally accomplished globally by the company; i.e., production and price data for the entire state is downloaded at one time into the computer system. Appraisan also individually gather and record specific and particular information to the appraisal file records, which serves as the basis for the valuation of mineral properties. P&A is divided into four district offices covering different geographic areas. Each office has a district manager, appraisal and ownership maintenance staff, and elected staff as appropriate. While overall standards of performance are established and uplied for the various district offices, quality of data is couplissized as the goal and responsibility of each appraiser.

VALUATION ANALYSIS (MODEL CALIBRATION)

Appropriate revisions and/or enhancements of schedules or discounted cash flow software are annually made and then rested prior to the appraisals being performed. Calibration typically involves performing multiple discounted tash flow tests for lesses with varying parameter input to check the correlation and relationship of such indicators as: Tottlars of Vulue Per Borrel of Reserves; Dollars of Vulue Per Doily Average Borrel Produced; Dollars of Expense Per Doily Average Borrel Produced; Vears Payout of Purchase Price (Fair Market Value). In a more classical calibration procedure, the validity of values by P&A's income approach to value is tested against actual market transactions, if and when these transactions and verifiable details of these transactions are disclosed to P&A. Of course these transactions must be analyzed for meeting all requisites of fair market value definition. Any copolosions of this analysis are then compared to industry banchmarks for reasonableness before being incorporated into the calibration procedure.

INDIVIDUAL VALUE REVIEW PROCEDURES

Individual property values are reviewed several times in the appraisal process. P&A's discounted cashflow software dynamically generates various benchmark indicators that the appraiser reviews concurrent with the value being generated. These benchmarks often prompt the appraiser to reevaluate some or all of the parameters of data entry su as to arrive at a value more indicative of industry standards. Examples of indicators are dollars of value per borrel of oil reserve, years payout, etc. In addition to appraiser review, taxpayers are afforded the opportunity to review the appraised values, either before or after Notices of Appraised Value are propated. Operators routinely meet with P&A's appraisers to review parameters and to provide data not readily available to P&A through public or commercial sources, such as individual lease operating expense and reserve figures. And of course, all property values are subject to review through normal procest and Appraisal Review Board procedures, with P&A acting as an extension of the Office of the Chief Appraisar.

PERFORMANCE TESTS

An independent test of the appraisal performance of properties appraised by P&A is conducted by the State of Texas Comproller's Office through the annual Property Value Study for school funding purposes. This study determines the degree of uniformity and the median level of appraisal for mineral properties. School jurisdictions are given an apportunity to appeal any preliminary findings. After the appeal process is resolved, the Comptroller publishes a report of the findings of the study, including in the report the median level of appraisal, the coefficient of dispersion around the median level of appraisal and any other standard statistical measures that the Comptroller considers appropriate.

ESPAP STANDARDS RULE 6-1: MASS APPRAISAL OF INDUSTRIAL, UTILITY AND RELATED PERSONAL PROPERTY

Moto: This section, in conjunction with any attached at separately provided P&A-generated approximal separate specific to the subject property or properties, constitutes the "mass approximal written report" as required by USPAP Standards Rule 5.1. USPAP Standards Rule 6.2 (certification) can be found at the end of this report USPAP Standards Rules 5-1 through 5-7 (mateuritera and explanations regarding the development application, and reconcilitation of mass approximal values), as they apply to P&A mass approximate procedures, are discussed below. HISPAP DOES MOT DICTATE THE FORM, FORMAT, OR STYLE OF APPRAISAL REPORTS, WHICH ARE PLINCTIONS OF THE NEEDS OF USERS AND PROVIDERS OF APPRAISAL SERVICES, USEAP ALSO DOES NOT MANDATE THAT FACH APPRAISAL REPORT BE LENGTHY AND FULL OF DISCLAIMERS. Readers should note that all H&A reports, tasks stated off environmentation and detail may be available per certain Texas Property Tax Code provisions.

INTRODUCTION

<u>Definition of Appraisal Responsibility</u>: The Engineering Services Department of Princhad & Abbott, Inc. (P&A) is responsible for developing fair and uniform market values for industrial, utility and personal properties.

P&A's typical client is a governmental entity charged with appraisal responsibility for all values in two purposes, although inder types of ellens (private businesses, individuals, cic.) occasionally contract for appraisal services which are strictly for various considerant tax curposes so that no conflicts of laterest are created with P&A's rore at value must work.

P.O.A. hereby makes the assumption that in all appealaci assignments performed for governmental endtles in satisfaction of contractual obligations related to ad valorem taxt, the client does not wish to or cannot legally request the appealsal report not identify the client.

Intended users of our reports are typically the client(s) for which we are under direct contract. Although hypayars or their agents, who own end/or represent the subject property being appraised often receive these reports either by law or as a country of the client or P&A, this receipt does not mean these perties attendedally become intended Users as defined by USPAP. A party recalving a copy of a report in order to satisfy disclosure requirements does not become an intended user of the appraisal or mass appraisal unless the appraisal specifically identifies such party as an intended user. Potential other users acclude parties involved in adjudication of valuation disputes (inview brand members, lawyout, judges, etc.), governmental agencies which periodically review on appraisals for various statutory purposes (such as the Texas Comparallel's Office) and private parties who may chieful explanation of particular through Open Records Requests made to governmental agencies.

P&A believes this section of this report, in conjunction with any emothed or separately provided P&A generated report(s), meets the USPAP definition of "typical practice"; i.e., it satisfies a level of work that is consistent with:

- the expectations of participants in the market for the same one inflat appraisal services; and
- what P&A's peers' actions would be in performing the same or similar appraisal services in compliance with USPAP.

This section of P&A's USPAY report is not applicable to any Industrial, USBig, or relined Personal Property that an approximal district approximal substitute approximal district's overall USPAP report should be referenced.

P&A makes the Extraordinary Assumption that all properties appraised for advalorem tax purposes are marketable whereas connership and title to property are free of encumbrances and other restrictions that would affect fair market value to an extent not obvious to the general marketplace. If and/or when we are made aware of any encumbrances, etc., these would be taken into account in our appraisal in which case the extraordinary assumption stated above would be revoked.

Legal and Statutory Requirements: The provisions of the Texas Property Tax Code and relevant legislative measures involving appraisal administration and procedures control the work of P&A as a subcontractor to the Appraisal District. P&A is responsible for appraising property on the basis of its market value as of January 1 for ad valorem tax purposes for each taxing unit that imposes ad valorem taxes on property in the contracted Appraisal District. All industrial, utility and personal properties are reappraised assurably. The definition of Fair Market Value is provided and promulgated for use in ad valorem tax work in Texas by the Texas Property Tax Code, and therefore as a Jurisdictional Exception supercedes the definition of "market value" as found in USPAP definitions.

Administrative Requirements: P&A follows generally accepted and/or recognized appraisal practices and when applicable, the standards of the International Association of Assessing Officers (IAAO) regarding its appraisal practices and procedures. P&A, when applicable, also subscribes to the standards promulgated by the Appraisal Fuundation known as the Uniform Standards of Professional Appraisal Practice (USPAP). P&A submits annual or biannual contract hids to the Office of the Chief Appraiser and is bound to produce appraisal estimates on industrial, utility and personal properties within the cost constraints of said bid. Any appraisal practices and procedures followed by P&A not explicitly defined through IAAO or USPAP requirements are specified by the Texas Property Tax Code and/or at the specific request or direction of the Office of the Chief Appraisar.

Appraisal Resources

<u>Personnel</u>: The Engineering Services Department and P&A's appraisal staff consists of appraisers with degrees in originaering, business and accounting. All personnel are Registered Professional Appraisers with the State of Texas, or are progressing towards this designation as prescribed by the Texas Department of Licensing and Regulation (TDLR).

Date: A set of data characteristics (i.e. original cost, year of acquisition, quantities, capacities, not uporating income, property description, etc.) for each industrial, utility and personal property is collected from various sources. This data is maintained in either hard copy or computer files. Each property's characteristic data drives the appropriate computer-resisted approach to valuation.

<u>Information Systems</u>: P&A's mainfiliante computer system is composed of in-house custom software augmented by schedules and databases that reside as various applications on personal computers (PC). P&A offices a variety of systems for providing property owners and public entities with information services.

VALUATION APPROACH (MODEL SPECIFICATION)

Concepts of Value: The valuation of industrial, utility and personal properties is not an exact science, and exact accuracy is not ottainable due to many factors. These are considered complex properties and some are considered Special Purpose properties. Nevertheless, standards of reasonable performance do exist, and there are reliable means of measuring and applying these standards.

The evaluation and appraisal of industrial, utility and personal property relies beavily on the discovery of the property followed by the application of recognized appraisal techniques. The property is subject to inflation and depreciation in all forms. The appraisal of industrial and personal property involves understanding petroleum, chemical, steel, electrical power, humber and paper industry processes along with a myriad of other industrial processes. Economic potential for this property usually follows either the specific industry or the general husiness economy. The appraisal of utility properties involves understanding telecommunications, electrical transmission and distribution, petroleum pipelines and the nativoid industry.

Utility properties are subject to regulation and economic obsolescence. The examination of utility property involves the understanding of the present value of future income in a regulated environment.

The goal for valuation of industrial, utility and personal properties is to approise all taxable property at "fair market value". The Texas Property Tax Code defines Fair Market value as the price at which a property would transfer for cash or its equivalent under prevailing market conditions if:

- exposed for sale in the open market with a reasonable time for the seller to find a purchaser;
- both the seller and the purchaser know of all the uses and purposes to which the property is adopted and for which it is capable of being used and of the enforceable restrictions on its use; and
- both the seller and purchaser seek to maximize their gains and neither is in a position to take advantage of the exigencies of the other.

Approaches to Value for Industrial, Utility, and Personal Property

Cost Approach: The use of cost data in an appraisal for market value is based upon the economic principle of substitution. This method is most readily applicable to the appraisal of industrial and personal property and some utility property. Under this method, the market value of property equals the value of the land plus the current cost of improvements less accrued depreciation. An inventory of the plant improvements and machinery and equipment is maintained by personally inspecting each facility every year. As a general rule, and for the reasons stated above, Pritchard & Abbott, Inc., relies predominantly on the cost approach to value in the appraisal of industrial, utility, and personal property.

Market Approach: This approach is characterized as one that uses sales data available from actual transactions in the market place. There are two factors that severely limit the usefulness of the market approach for appraising industrial, utility and pursonal properties. First, the property sales data is soldow disclosed; consequently there is insufficient market data for these properties available for meaningful statistical analysis. Second, all conditions of sale must be known and carefully investigated to be sure one does have a comparative indicator of value. Many times whom these properties do change hands, it is generally through company mergers and acquisitions where other assets and intangibles in addition to the industrial, utility and personal property are involved. The complexity of these sales presents unique challenges and hindrances to the process of allocation of value to the individual components of the transaction.

In the case of industrial, utility and personal properties, a scarcity of sales requires that all evidence of market data be lovestigated and analyzed. Factors relative to the sale of these properties are:

- plant capacity and current production; terms of sale, cash or equivalent;
- complexity of property;
- age of property;
- proximity to other industry already operated by the purchaser, and
- adter factors such as capital investment in the property.

As a general rule, and for the reasons stated above, Pritchard & Abbutt, Inc., rurely employs a rigorous application of the market approach in the appraisal of industrial, utility, and personal property.

Income Approach: This approach to value most readily yields itself to all income generating assets, especially utility properties. Data for utility properties is available from annual reports submitted to regulatory agencies whereby future income may be estimated, and then this future income may be converted into an estimate of value. The valuation of an entire company by this method is sometimes referred to as a Unit Value. Many refer to this as a capitalization method, because capitalization is the process of converting an income stream into a capital sum (value). As with any method, the final value estimate is no better than the reliability of the input data. The underlying assumption is that people purchase the property for the future income the property will yield.

The relevant income that should be used in the valuation model is the expected future not operating income after depreciation but before interest expense (adjustments for Federal Income Taxes may or may not be required). Assumptions of this method are:

- Post income and expenses are a consideration, insofar as they may be a guide to future income, subject to regulation
 and competition.
- The communic life of the property can be estimated.
- The flature production, revenues and expenses can be accurately forceasted. Future income is less valuable than
 current income, and so future not income must be discounted to make it equivalent to the present income. This
 discount factor reflects the premium of present money over future money, i.e., interest rate, liquidity, investment
 management, and risk.

As a general rule, and for the reasons stated above, Pritchard & Abbott, Inc., employs the income approach in the appraisal of industrial and utility property only when quentifishle levels of income are able to be reliably determined and/or projected for the subject property. P&A does not employ the income approach in the appraisal of personal property.

DATA COLLECTION/VALIDATION

Sources of Data: The main source of P&A's property data for industrial and personal property is through fieldwork by the appraisers and commercially/publicly available schedules developed on current costs. Data for performing utility appraisals is cypically provided by the taxpayer or is otherwise available at various regulatory agencies (Texas Railroad Commission, Public Utilities Commission, FERC, et. al.). Other discovery tools are financial data from annual reports, information from chief appraisers, renditions, (ax assessors, trade publications and city and local newspapers. Other members of the public often provide P&A information regarding new industry and other useful facts related to property valuation.

Onto Collection Procedures: Electronic and field data collection requires argunization, planning and supervision of the appraisal staff. Data collection procedures have been established for industrial and personal properties. Appraisers gather and record information in the mainframe system, where customized programs serve as the basis for the valuation of industrial, utility and personal properties. P&A is divided into multiple district offices covering different geographic zones. Each office has a district manager and field staff. While overall standards of performance are established and upheld for the various district offices, quality of data is emphasized as the goal and responsibility of each appraiser. Additionally, P&A's Engineering Services Department provides supervision and guidance to all district offices to assist in maintaining uniform and consistent appraisal practices throughout the company.

VALUATION ANALYSIS (MODEL CALIBRATION)

The validity of the values by P&A's income and cost approaches to value is tested against actual market transactions, if and when these transactions and verifiable details of the transactions are disclosed to P&A. These transactions are checked for meeting all requisites of fair market value definition. Any conclusions from this analysis are also compared to industry benchmarks before being incorporated in the calibration procedure. Appropriate revisions of cost schedules and appraisal software are annually made and then tested for reasonableness prior to the appraisals being performed.

INDIVIDUAL VALUE REVIEW PROCEDURES

Individual property values are reviewed several times in the appraisal process. P&A's industrial, utility, personal property programs and appraisal spreadsheets afford the appraiser the opportunity to review the value being generated. Often the appraisar is prompted to revealuate some or all of the parameters of data entry so as to arrive at a value more indicative of industry standards. Examples of indicators are original cost, replacement cost, service life, age, not operating income, capitalization rate, etc. In addition to appealise review, texpayers are afforded the opportunity to review the approach values

cisher before or offer Notices of Appreciaed Value are prepared. Trapeyers, agents and representatives mutinely meet with P&A's appraises to review parameters and to provide data not readily available to P&A through public or commercial sources, such as investment costs and explication rate studies. And of course, all property values are subject to review through normal protest and Appreciaed Review Board procedures, with P&A acting as a representative of the Office of the Chief Appreciae.

PERFORMANCE TESTS

An independent test of the approach performance of properties appraised by 1%A is conducted by the State of Texas Compitation's Office through the arguet Property Value Stady (i) school funding purposes. This study determines the degree of uniformity and the median level of appraisal for utility properties. School jurisdictions are given an opportunity to appeal any prefinal range findings. After the appeal process is resolved, the Compitation publishes a report of the firdings of the study, including in the report the median level of appraisal, the coefficient of dispersion around the median level of appraisal and any other standard statistical measures that the Computation considers appropriate.

Defined Market Areas

As of August 1, 2016

The following map is for general location and illustration purposes.

Specific neighborhood boundaries are more specifically recognizable as displayed in the district's GIS system.

The following table includes market areas currently recognized by FCAD. Appraisal model calibration includes analysis of sales in each identified market area (neighborhood) to determine an adjustment factor (market modifier) that will adjust the appraisal model for its location.

| Market Area | Neighborhood Code |
|-------------------|----------------------|
| RURAL BISD | BISD |
| BURLESON LAKE | BLAKE |
